West separate member access

```
SIE::Ver result{
  .series = me.meta.series
  ,.verno = (me.meta.verno)?*me.meta.verno:0
  ,.verdate = me.defacto.date
  ,.vertext = me.defacto.caption};
```

West separate member access
Works for nested lists too

```
BAS::MetaEntry me{
  .meta = {
    .series = 'A'
  }
  ,.defacto = {
    .caption = had->heading
    ,.date = had->date
  }
};
```
